

Business Competency

ChemOptics supplies electronic materials for semiconductor and devices for optical communication for future advanced industries.

We also provide foundry services to support R&D and process validation for photonic semiconductor technologies.

Optical Material

Waveguide Resin

- *ChemOptics' Waveguide Resin is a UV-curable resin based on fluorinated acrylates.*
- *Waveguide Resin is designed for the application of optical waveguide devices and optical thin films used in optical communication.*
 - Low optical loss
 - Low birefringence
 - Superior environmental stability
- *To meet the needs of use in various waveguide structures, the combination of standard polymer resins allows precise and continuous control of the refractive index.*

Singlemode Waveguide Resin

Multimode Waveguide Resin
