

DPX-1721

Broadband Diplexer 21.5 - 40 GHz

DEVICE OVERVIEW

General Description

The DPX-1721 is a broadband low pass/high pass diplexer capable of multiplexing low frequency (DC-17 GHz) and high frequency (21.5-40 GHz) signals. The novel design offers extremely low insertion loss and high isolation between the low pass and high pass channels. The DPX-1721 is an excellent solution for applications such as high frequency/baseband signal routing (especially following a broadband high frequency mixing stage), low loss power splitting/combination, separation of harmonic tones, and general-purpose lab use.
