PRODUCT SUMMARY

The HL930x series are ultra-broadband 180° signal splitters and combiners that offer excellent amplitude and phase match over a bandwidth of 8 MHz to 67 GHz.

The HL930x series is a lower-cost alternative to the HL940x when the lowest low-frequency cutoff is not required.

They are suitable for use in high-speed analog-to-digital conversion, frequency response testing for differential devices, and many other applications.

DEPLOYMENT NOTES

When the device is used as a signal combiner using differential signals with unmatched source impedance, attenuators (3-6 dB) may be required to improve isolation.

If the DC voltage of the balanced or unbalanced ports is non-zero, DC blocks are required. The balanced ports (2 and 3) are DC shorted.
