

HL947x Series Resistive Power Dividers (DC to 67 GHz)

Features and Technical Specifications¹ (HL9477 shown)

PRODUCT SUMMARY

The HL947x series are ultra-broadband 6 dB power dividers that provide outstanding amplitude- and phase-symmetrical power division from DC to beyond 67 GHz.

This product is designed using a three-resistor network resulting in outputs that are nominally attenuated to 6 dB, and all ports are impedance-matched to 50 Ohms when the ports are terminated.

They are suitable for use in 112 Gbps PAM4 communications systems, high-speed analog-to-digital conversion, frequency response testing for differential devices, and many other applications.

DEPLOYMENT NOTES

The ports of the HL947x series are symmetrical and the device can be used in any direction.

HL947x Insertion and Return Loss

The HL9477 is matched to 50 Ω on all ports. Port 1 is specified with a dot on the label, and Ports 2 and 3 are matched.

Figure 1 shows the HL9477 insertion loss and amplitude match on Ports 2-3 to 70 GHz. Figure 2 shows return loss on all three ports of the same device to 70 GHz. Other models show similar performance within their respective specified bandwidths.

HL947x Group Delay and Phase Match

Figure 3 shows the typical group delay of an HL9477. The average slope of the phase mismatch, shown in Figure 4, is equal to the group delay mismatch. Other models show similar performance within respective specified bandwidths.

The eye diagrams in *Figures 5-1* show a 56 Gbps PRBS11 pattern passed through an HL9477.

Figures 6-7 show a 112 Gbps PAM4 signal passed through the HL9477.

All plots are shown at 100 mV/div.
