

# InvisiCable™ In Room Solution

18Gbps Uncompressed HDMI Optical  
Cable That "Disappears in Plain Sight"

# InvisiCable™ In Room Solution

You've never seen anything like it.

## What is **InvisiCable**?

**InvisiCable™** is a complete HDMI cabling solution that combines Inneos award winning Real4K™ optical adapters with a unique translucent SSF® optical fiber that is so thin it disappears in plain sight. **InvisiCable** provides the performance of optical cables with unprecedented aesthetics. **InvisiCable** solutions are specifically designed for either **In Room** or **Through Wall** applications.

## How does **InvisiCable** work?

Inneos Real4K optical adapters use multiple lasers operating at different wavelengths focused onto a single optical fiber. **InvisiCable** is a single strand of industry standard fiber with a translucent jacket which can carry the multiple wavelengths. Together the optical adapters and the pre-terminated special fiber creates a turnkey optical cable solution with 18Gbps performance that is nearly invisible.

## What is included in the **InvisiCable In Room Solution**?

The **InvisiCable In Room Solution** includes 75 feet of **InvisiCable** wrapped around our **Magic Disk**. The **Magic Disk** is so small and light that it fits into the palm of your hand (2.75" diameter by 0.7" height, weighs <3 ounces). The **Magic Disk** is used to manage any fiber, so installations are clean and tidy. It's magnetic and comes with a complementary tape backed, so excess metal plate used to affix the magic disk virtually anywhere. The **InvisiCable In Room Solution** also includes a set of Real4K optical adapters.

**InvisiCable**  
Magic Disk

## Features and Benefits

- Complete turnkey solution — Everything an installer needs to connect 4K sources to displays up to 75 feet from one another.
- No one wants to see those big fat ugly HDMI cables. **InvisiCable** replaces those "old" style cables with an ultra-sleek, nearly invisible fiber.
- Save time, money, and potential trouble by not punching through walls to hide cables.
- Provide Real4K bandwidth and performance (18Gbps uncompressed) to your customers.
- Give your customers the assurance of the highest quality, reliability, and interoperability (made in the USA, DPL Labs certified).
