**DESCRIPTION**

The QD2326B is a quadrature (I/Q) demodulator optimized for direct conversion receivers. When the passive demodulator is supplied with a LO drive signal, the RF input is directly converted to differential I and Q baseband outputs.

Internally matched lowpass filters provide anti-alias functionality for interfacing to high-speed A/D converters.

For more information on interfacing the QD2326B to differential A/D converters and single-ended loads, please see Application Note 102A, "Interface Circuits for the QD Series Quadrature Demodulators."

**TYPICAL APPLICATION: DIRECT CONVERSION RECEIVER**
