

## MISS *SWIR* Spectrometer

MISS stands for Mini Imaging Spatial Spectrometer. This innovative spectrometer gives access to the spatially resolved spectrum of your sources. Thanks to its unique compactness, the MISS allows vertical and horizontal spatial chirp measurements at any position of your beam path. It can easily be integrated at different stages of amplified laser systems. Originally available with Si-based cameras, **the MISS now offers a unique solution to measure 2D spectrum of laser sources covering SWIR and VSWIR wavelength ranges, thanks to InGaAs-based detectors.**
