

Pluggable nanoOCM

Pluggable nanoOCM

The smallest Flex-Grid Optical Channel Monitor (OCM) in a QSFP form factor. Packaged in a QSFP module, PhotonPath's compact Optical Channel Monitor (nanoOCM) enables precise measurement of critical parameters in DWDM optical channels. The OCM operates using a narrow-band reconfigurable filter that scans across the entire C-band to capture the signal spectrum. It operates similarly to a traditional Optical Spectrum Analyzer, offering a resolution bandwidth of 15 GHz.
