

nanoOCM

nanoOCM

Our nanoOCM delivers cutting-edge performance in the smallest form factor on the market. Powered by a narrow-band, fast-tuning reconfigurable filter, the nanoOCM scans the C-band to provide a high-resolution spectrum view of your signals. This will help to detect issues, troubleshoot problems, and optimize your optical network performance. With its single-port design (4 ports version available soon), support for flex-grid channel plans, PhotonPath's nanoOCM is built to adapt seamlessly as your network evolves.
